(54) IMPLEMENT FOR SUPPLYING
MEDIUM-TO-BE-RECORDED

(57) Abstract:

PROBLEM TO BE SOLVED: To provide an implement for supplying a medium-to-be-recorded for simplification of printing of a predetermined design or the like at a predetermined position on an expandable and contractible medium to be recorded.

SOLUTION: The implement for supplying a medium-to-be-recorded comprises an upper film 101 and a lower film 102 for fixedly sandwiching a T-shirt 200 therebetween. In this case, an opening 110 for forming an image on the T-shirt 200 by an ink jet printer is provided at a predetermined position of the film 101. Thus, the T-shirt 200 is fixedly sandwiched from above and below between the film 101 and the film 102 so as to be scarcely expanded or contracted and moved in a medium-to-be-recorded supplying and holding implement 100, and to become an easily feedable state. And, the T-shirt 200 is supplied to an ink jet printer as being held in this state as it is, and printed with a pre-

determined design or the like by an ink jet head provided in the printer at a predetermined position of the T-shirt 200 exposed from the opening 110 provided at the predetermined position of the film 101.
